KID INSTRUCTIONS

An **algorithm** is just a list of steps to do something. Even making a sandwich is an algorithm! Let's see if you can write one.

Algorithm

Algorithm — A step-by-step set of instructions to solve a problem or complete a task.

Basic Version

Write 5 steps to make a peanut butter sandwich. Be specific!

Challenge Version

Write your steps, then have someone follow them exactly. Did it work? What was missing?

Reflection Box

Self-Check

- ☐ I used at least 5 steps
- ☐ My steps are in the right order
- ☐ I was specific (e.g., "open the bag" not just "get bread")
- ☐ I tested my algorithm on a friend or family member

Bonus: Cut & Sort!

Cut out these steps and glue them in the correct order.

CUT ALONG THE DASHED LINES

Spread peanut butter

Open the bread bag

Take two slices of bread

Close the sandwich

Get a butter knife

TEACHER / PARENT NOTE

This activity introduces the core CS concept that algorithms are precise instructions. Common gap kids miss: opening the bread bag, using a knife, etc. — the lesson is that computers need extreme specificity.
