KID INSTRUCTIONS

In the last activity, you put your morning routine in order. But here's the cool part — you do that SAME routine almost every single day. That's called a **loop** — when something repeats over and over!

Loop

Loop — Something that repeats. Instead of writing the same step 100 times, you just say "do this 100 times."

Example: When you do 10 jumping jacks, that's a loop! You're repeating the same move 10 times instead of writing "jump and clap, jump and clap, jump and clap..." over and over.

Basic Version

Find the Repeat — Read each one. Circle the part that repeats, then fill in the blanks below.

1. Song: "If You're Happy and You Know It"

*If you're happy and you know it, clap your hands (clap clap)
If you're happy and you know it, clap your hands (clap clap)
If you're happy and you know it, then your face will surely show it
If you're happy and you know it, clap your hands (clap clap)*

What repeats? _____ How many times? _____

2. Workout: P.E. Warm-Up

*Do 10 jumping jacks.
Rest for 5 seconds.
Do 10 jumping jacks.
Rest for 5 seconds.
Do 10 jumping jacks.*

What repeats? _____ How many times? _____

3. Recipe: Cooking Pancakes

*Pour batter onto the hot pan.
Wait until you see bubbles.
Flip the pancake.
Cook 1 more minute.
Take it out — then start the next one!*

Hint: how many pancakes if you make 5?

What repeats? _____ How many times? _____

4. Daily Habit: Brushing Your Teeth

*Every morning, brush your teeth.
Every night, brush your teeth.
Do this every single day for a whole week.*

What repeats? _____ How many times in a week? _____

Challenge Version

Loop Detective — Real life is full of loops! For each scenario, figure out what's repeating, then write the loop in shorthand like this: Repeat [action] [number] times.

Scenario A: Morning Attendance

It's the start of class. The teacher reads from a list of 25 students. For each name, the teacher calls it out, and that student says "Here!" Then the teacher moves to the next name. This continues until every student has been called.

Write the loop:

Scenario B: Setting the Dinner Table

You're helping set the table for your family of 4. At each spot, you place: a plate, a fork on the left, a knife on the right, a spoon next to the knife, and a folded napkin on top of the plate. You do this for every person.

Write the loop:

Reflection Box

Why is using a loop better than writing the same step 100 times? What might go wrong if you tried to write it out by hand?

Self-Check

- ☐ I circled the part that repeats in all 4 Basic examples
- ☐ I wrote the loop shorthand for both Challenge scenarios
- ☐ I used the format "Repeat [action] [N] times"
- ☐ I can explain in my own words why loops are useful

Bonus: Spot the Loop in a Pattern

Look at each pattern below. Figure out the loop, then predict what comes next!

Pattern A — Shapes

What repeats? _____

The next 3 shapes are: _____

Pattern B — A Dance

Step Left → Clap → Step Right → Clap → Step Left → Clap → Step Right → Clap...

Hint: it's only 4 moves long, then it starts over.

What's the loop? _____

Pattern C — Weekly Chores

- Monday: Trash
- Tuesday: Recycling
- Wednesday: Trash
- Thursday: Recycling
- Friday: Trash
- Saturday: Recycling

What repeats? _____

How long is the loop (how many days before it starts over)? _____

TEACHER / PARENT NOTE

This activity introduces loops (also called iteration) — one of the three core control structures in programming, alongside sequence (Activity 2) and selection (coming up in Activity 5). Kids learn that repetition is everywhere in real life, and that programmers use loops to avoid writing the same code over and over — which saves time AND prevents mistakes. Discussion prompt: Ask your child to spot 3 loops in their own daily life — at home, at school, or in a hobby.
