

How to Use This Workbook

This workbook is designed to be flexible. Kids can work through the activities at their own pace, and the same content adapts to different schedules. Pick the pacing that fits YOUR situation.

THREE PACING OPTIONS

1. 1-Week Intensive

Pace: 2–3 activities per day

Timeline: Complete in 5–7 days

Best for: Summer camps, spring break, gifted kids who love to binge, or a focused CS week

2. 4-Week Unit

Pace: 3 activities per week

Timeline: Complete in ~4 weeks

Best for: Homeschool weekly rhythm, structured after-school time, or a monthly enrichment plan

3. 12-Week Light Schedule

Pace: 1 activity per week

Timeline: Complete over a full semester

Best for: Elementary CS class, gentle weekly drip, or when you want deep discussion time on each concept

Materials Needed

- A pencil (or crayons for younger kids)
- Scissors and glue (only for cut-and-paste bonus activities)
- 5–10 small everyday objects (only for hands-on bonuses like sorting)
- A curious mind — that's it!

Tips for Success

- 1 Do the BASIC version first, then try the CHALLENGE version if ready
- 2 Read the "How It Works" sections carefully — they explain the rules for each new concept
- 3 The bonus activities are the MOST fun — don't skip them! Many are hands-on or social
- 4 It's OK to make mistakes. Debugging is a real CS skill — finding what went wrong is half the learning
